**3. Installation, configuration, and licensing**

**3.1 What are the licensing options for Autodesk Infrastructure Design Suite?**

It has never been easier to get the Autodesk software you want with a variety of purchase options to meet the unique needs of your business. You can license Autodesk Infrastructure Design Suite via pay-as-you-go plans (Desktop Subscription) as well as perpetual licenses. Pay-as-you-go enables you to license software on a short-term basis with monthly, quarterly or annual plans—a great choice for customers who have short-term project and staffing needs and want to ramp up their business quickly. A perpetual license is ideal for customers who need ongoing access to Autodesk software.

**3.2 Do all products in Infrastructure Design Suite need to be used on the same workstation?**

Yes, the software applications within an Autodesk Infrastructure Design Suite license can only be installed on a single computer. They cannot be split across multiple workstations.

**3.3 What if I have more than one computer? Can I use my software on multiple machines?**

Autodesk recognizes that some users may need to operate the software when they are away from their usual work location. To accommodate this need, the product activation technology, and certain license types, enable an employee to install the software on a second computer owned by the employee’s company, provided it is for use away from the employee’s usual work location, the software is used only by that employee and no other, and only one of the two copies of the software is ever in use at any one time. Consult the Autodesk License and Services Agreement for details about using the software on a second computer.
