Holman's Managed Backup Services

What would be the cost to your business if you lost your critical data? Being able to recover and restore data quickly and easily isn't an option anymore, it's a requirement.

Holman's has expanded our TotalCare Managed Services program offering with two new products — **Managed Backup and Replication Services** — to work in conjunction with our N-Central monitoring capability. Powered by StorageCraft, the backup software allows Holman's to backup files and folders, applications, and operating system information from your onsite server to a NAS product (Network-Attached Storage), and then copy this encrypted backup image from your NAS to Holman's NAS data center. All of the activity is monitored by Holman's N-Central application, which allows immediate notified of any interruptions in the backup scenario.

While traditional data backup requires manual (or scheduled) backing-up after files are edited, Holman's backup services automates the process of moving changes you make to your original copy to your "backup" copy. The user can instantly access the duplicate file on the second system should the first disk fail, making it a vital component of a disaster recovery plan.

Benefits of Managed Backup Services

- Worry-free disaster recovery solution.
- 2-in-1: license includes backup and replication
- Own your own NAS device with no annual renewal fees.
- No more carrying data back-and-forth from different locations.
- Fast replication can backup an entire server to a new server in a few hours.
- Eliminates the need to house multiple servers.
